

## Step 3 - Solve the First Layer

- If the white face of the correct piece faces the top, position it directly above the correct position first
- Use Swing Down twice and you'll see its white face now faces the side, albeit not directly above the correct position
- Can you now get it to the correct position? (Hint: use U first)
- (2x “Swing Down” is actually just  $R \ U \ U \ R'$ )

## Step 4 - Complete the second layer

- Twist a piece from top to the correct position in the second layer
