$$\left\langle \left(\left\langle x \right\rangle \right) \right\rangle = \left(1 \div \left(1 \div x \right) \right) = x$$

Abstract Math

定義 $\mathfrak{L} x = 1 \div x$

求 $\mathfrak{L} (\mathfrak{L} 15)$

$$\begin{aligned}\mathfrak{L} (\mathfrak{L} x) &= (1 \div (1 \div x)) \\ &= x\end{aligned}$$

求 D

$$\begin{array}{r} 1 \quad 4 \quad 7 \quad 8 \\ \times \quad \quad \quad A \\ \hline 5 \quad B \quad C \quad D \end{array}$$

- A has to be 4
- Therefore D must be 2
