

Abstract

正
義
之
說

$$\left\langle \downarrow \left(\left\langle \downarrow x \right) \right) \right\rangle = (1 \div (1 \div x)) = x$$

Abstract Math

定義 $\leftarrow x = 1 \div x$

求 $\leftarrow (\leftarrow 15)$

$$\begin{aligned}\leftarrow (\leftarrow x) &= (1 \div (1 \div x)) \\ &= x\end{aligned}$$

求 D

$$\begin{array}{r} & 1 & 4 & 7 & 8 \\ \times & & & & A \\ \hline & 5 & B & C & D \end{array}$$

- A has to be 4
- Therefore D must be 2
